Use Server's Log	<input type="checkbox"/> Yes
File Name	<input type="checkbox"/> /usr/local/lsws/logs/error.log
Log Level	<input type="checkbox"/> ERROR
Rolling Size (bytes)	<input type="checkbox"/> 10M
Keep Days	<input type="checkbox"/> 30
Compress Archive	<input type="checkbox"/> Not Set

Access Log 

Log Control	File Name	Log Format	Rolling Size (bytes)	Actions
Own Log File	/usr/local/lsws/logs/access.log	Not Set	10M	 

- When required, you can disable access logging for this virtual host to save on disk I/O.
- Log file path can be an absolute path or a relative path to \$SERVER_ROOT, \$VH_ROOT.
- A new log file will be created if current log file exceeds the rolling size. File size is in bytes and can be in multiple input formats: 10240, 10K or 1M.

Script Handler Definition

	Suffixes	Handler Type	Handler Name	Actions
	lspHP	LiteSpeed SAPI	[VHost Level]: lspHP	 

• Script handler can be a CGI, an FCGI app, a module handler, a Servlet engine, or a proxy to Web server.
• Except CGI, other handlers need to be predefined in the "External App" section.
